Ryan Campbell
Levi Jansen
Riley Lawson
Drake Ridgeway
Ryan Scehovic
Cody Stricker
Josue Torres

Report Period: Beginning of class - 10/07/2022

Summary of Progress in this Period

During this period, we have met with our client which highlighted the details about CAN FD and gave us an indepth presentation about what tools we can use to get a better grasp about how to create a virtual car network, use vms, use Socket CAN, demonstrate what our final goal is, and live demo certain tools and how they work. When gathering information about cryptography, we have reviewed different coding languages along with looking into these tools that were presented to us to acquire simple skills. We have also been working on our lightning talk presentation, as well as, the design requirements documentation.

Pending Issues

None yet as we haven't been implementing anything technical as of yet.

Plans for Upcoming Reporting Period

Our upcoming plans is to start looking/using into basic crypto and test these new given tools and determine which libraries we should be using within the CAN FD network.
